SUMMARY

IT Engineering student with strong foundations in Data Structures, Algorithms, and full-stack development. Experienced in building AI-powered applications using LLM APIs, RAG pipelines, and cloud deployment. Interested in scalable systems, AI search, and developer platforms.

EDUCATION

University of Pune (SPPU)
BE (Information Technology)

2023-2027
GPA: 7.95/10

Senior Secondary (XII)
IVM's Indrayani Junior College

2022
64.80%

Secondary (X)
Kantilal Shah Vidyalaya

2020
88.88%

CORE COMPETENCIES

Programming Languages: Python, Java, C++, JavaScript

Web Technologies: React.js, Node.js, Express

AI & LLM Tools: RAG, Groq API, Llama 3

Cloud & Deployment: Vercel, Render, Webhooks, REST APIs

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, Postman

CS Fundamentals: Data Structures, Algorithms, OOP, DBMS, OS

PROJECTS

AYUSH-ICD Assistant | React.js (Vite), Node.js, Express, MongoDB, Groq API

GitHub Link: <https://github.com/TanmayGiramkar/Ayush-ICD> | **Live Demo:** <https://ayush-icd-assistant.vercel.app/>

- Developed a full-stack healthcare application that maps AYUSH disease terminology to WHO ICD-11 codes, enabling standardized data representation for digital medical records.
- Implemented an AI-assisted search pipeline using Groq LLM APIs to interpret disease queries and retrieve relevant ICD mappings from structured datasets.
- Built RESTful APIs using Node.js and Express to process search requests and return structured diagnostic data.
- Designed a MongoDB database with multi-field search and indexing for efficient disease lookup and scalable data retrieval.
- Deployed the React frontend on Vercel and backend on Render, integrating uptime monitoring with UptimeRobot to maintain 24/7 application availability.

Real Estate AI Agent & Automation System | React.js, Node.js, RAG, Groq API, Twilio, Render

GitHub Link: <https://github.com/TanmayGiramkar/Real-Estate-Agent> | **Live Demo:** <https://real-estate-agent-beta.vercel.app/>

- Developed a RAG-based chatbot using the Groq API that validates uploaded PDF brochures and generates responses strictly from verified document content to reduce LLM hallucinations.
- Built an automated lead capture pipeline using Make webhooks to extract structured user data (budget, location) and synchronize it with Google Sheets CRM for real-time lead tracking.
- Implemented automated engagement workflows using Twilio, sending WhatsApp onboarding messages, inactivity-based re-engagement notifications.
- Improved backend reliability on Render by implementing a custom keep-alive mechanism monitored via UptimeRobot, eliminating cold-start latency and maintaining 24/7 service availability.

AI-Powered Client Acquisition System (Real Estate) | React.js, Node.js, LLM Integration, Vercel

GitHub Link: <https://github.com/TanmayGiramkar/AI-Chatbot> | **Live Demo:** <https://real-estate-chatbot-three.vercel.app/>

- Built a full-stack conversational system that automates real estate client intake and lead qualification using natural-language interactions.
- Developed a responsive React.js chatbot interface that collects property requirements (budget, location, property type) through guided conversational flows.
- Implemented a Node.js backend integrated with Llama 3.2 to convert user conversations into structured lead data and synchronize it with Google Sheets CRM via Make webhooks.
- Deployed the application on Vercel, optimizing performance using lightweight AI inference and retry logic for consistent response handling.

ACHIEVEMENTS & ACTIVITIES: Volunteered in TNP recruitment drives, assisting with coordination and student support. Professional Tabla Player with 6 years of practice (First Class - Praveshika Pratham). Taluka Level Kabbadi Player.
